Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 6) ☐ Other: ____.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gibson et al (5557596) in view of Katsumura et al (6307826).

The primary reference shows an optical reading apparatus having the same structural elements as shown in fig 1A corresponding to fig 1A of the claimed invention. However the reference does not show the use of an electron beam deflector. The secondary reference discloses the use of an electron beam deflector for the purpose of positioning the beam on a desired location as shown in fig 1 elements 16 and 18. it would have been obvious to one skilled in the art at the time the invention was made to use the teachings of the secondary reference and modify the primary reference. Such modification of using a beam steering mechanism is merely an alternative engineering capability as opposed to moving the medium in order to eliminate the medium positioning apparatus. Thus one skilled in the art would have been motivated to use the teachings of the secondary reference for the purpose of positioning the beam at a desired location using a beam steering mechanism as opposed to a medium positioning mechanism.

With respect to the limitations of the dependent claims see figs 1A-5 of the primary reference.
